

AIPnD

Italian Society for Non-Destructive Testing Monitoring Diagnostics

art '17

12th International Conference

on non-destructive investigations and microanalysis for the diagnostics
and consevation of cultural and environmental heritage

TURIN

Politecnico di Torino - Lingotto

November 22nd/24th, 2017

FINAL PROGRAMME and ABSTRACT BOOK

Abd El Hady Mohamad

Cairo University (Egypt)

Attaelmanan A. Gaffar

University of Sharjah (UAE)

Beech Mark

Abu Dhabi Tourism and Cultural Authority (UAE), Ministry of Tourism and Antiquities (Jordan)

Boke Hasan

Izmir Institute of Technology (Turkey)

Cappabianca Claudio

AIpND, Italian Society for Non-Destructive Testing

Felicetti Roberto

Dipartimento di Ingegneria Civile e Ambientale, Politecnico di Milano

Fukunaga Kaori

National Institute of Information and Communications Technology, Tokyo Koganei (Japan)

Giovagnoli Annamaria

Istituto Superiore per la Conservazione e il Restauro, Roma

Jamhaw Monther Dahash

Ministry of Tourism and Antiquities (Jordan)

Jasim Sabah

Sharjah Department of Antiquities (UAE)

Maev Roman

University of Windsor, Ontario (Canada)

Menu Michel

C2RMF Centre de Recherche et de Restauration des Musées de France, Paris (France)

Nabah Bassam Abu

American University of Sharjah (UAE)

Ridolfi Stefano

ARS Mensurae, Roma

Serrano Jesús

AEND, Spanish NDT Society, Madrid (Spain)

Tiano Piero

Istituto per la Conservazione e la Valorizzazione dei Beni Culturali, Sesto Fiorentino, Firenze

Tsukada Masahiko

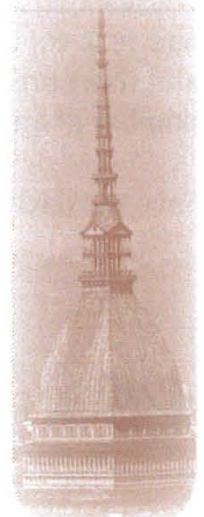

TUA, Tokyo University of the Arts (Japan)

Wadum Jorgen

Statens Museum for Kunst, Copenhagen (Denmark)

Zakaria Amer

American University of Sharjah (UAE)

art'17
12th International Conference

ORGANIZING COMMITTEE

Papponetti Mario

AIPnD President, Brescia (Italy)

Canova Aldo

AIPnD Scientific Council President

Hamdan Nasser

American University of Sharjah (UAE), Physics Department

Aslan Zaki

*Regional Representative of ICCROM for the Arab States and Director of ICCROM-ATHAR
Regional Conservation Centre in the UAE*

art'17
12th International Conference

TECHNICAL SECRETARIAT

Michele Carboni

AIPnD Council Member

Pia Anderson

American University of Sharjah

Giacinto Porco

AIPnD Honorary President

Hussain Alawadhi

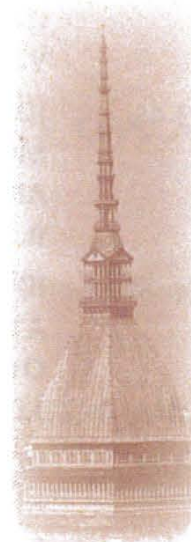

Director, Center for Advanced Materials Research, University of Sharjah

Ezio Tuberosa

AIPnD General Secretary

Najeh Jisrawi

Center for Advanced Materials Research, University of Sharjah

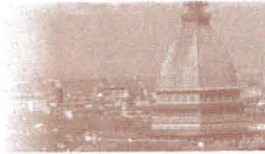

art'17
12th International Conference

ORGANIZING SECRETARIAT and CONFERENCE WEBSITE

Marta Corsini - Clementina Rizzetti

A NEW KIND OF DEVICE WHICH IS USING A GEOENERGETIC FIELD AND ZERO-POINT ENERGY TO DEHYDRATE WALLS AFFECTED BY RISING DAMP WITHOUT DISTURBING ANY WALLS

W. Mohorn, F. Di Paola

Conventional methods are always connected with the old wet and salty wall and show 7 different dangers especially for listed buildings: static problems with interventions, irreversible damages, long-term destruction of the horizontal barriers and electrodes – especially when ground salts are present, just to name the most important. A very advanced procedure bypasses these risks fully since 1985 and it can refer to approximately 1000 references of listed buildings and churches. The device called Aquapol uses a new physical principle which is called “magnetokinetic dehydration or hydration”. Its principle is based on the dynamical fields with a specific frequency generated by the earth. This physical principle is used to turn the moisture downwards in the wall back to the soil or even reversely upwards in capillary-active soils. For scientific accuracy the gravimetric method has been used as preferred moisture measurement method in buildings. The theoretical work hypothesis first got published – amongst others – in the Swiss NET-Journal in 1998 and 1999 and latest in SGEM 2015.

The innovative device is working on one hand with an geoenergetic field, which is similar to an electromagnetic field, but its structure is different. The device gets into resonance with this geoenergetic field and polarises it dextrorotatorily, then transmits it into the sphere of action to generate a downwards-force on hydrogen containing water molecules to dry out wet walls or increase moisture in the soil. On the other hand the device is using zero-point energy to intensify the transmitted field in the sphere of action. The effect got proofed by a lot of experts, dissertation-works and research-papers, some of which are also mentioned on the company's homepages.

Aquapol is available on the market since 1985, and has already been applied more than 52,000 times worldwide in over 40 countries in old buildings with rising damp.

Keywords: *Aquapol, magnetokinetic, wall dehydration, zero-point energy, gravimetric measurement method*
